Ceramic Drinking Water Filter Candle

Preparing the Filter for use

These instructions cover a variety of filter candle grades, therefore, please ensure that you follow the relevant instructions for the grade of candle that you have purchased.

Extreme cleanliness is important. Wash hands before handling the product and take care to ensure that no contamination of the components occurs during assembly.

Installation

When installing a new filter candle it is important to condition the filter with the incoming water using the following procedure:

<table>
<thead>
<tr>
<th>Rated Service Flow for Optimum Performance</th>
<th>Filter Capacity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Super Sterasyl Gravity Flow</td>
<td>533 USG/2000 L</td>
</tr>
<tr>
<td>ATC Super Sterasyl Gravity Flow</td>
<td>400 USG/1500 L</td>
</tr>
<tr>
<td>Sterasyl Gravity Flow</td>
<td>2600 USG/10,000 L</td>
</tr>
<tr>
<td>Ultra Fluoride Gravity Flow</td>
<td>400 USG/1500 L</td>
</tr>
</tbody>
</table>

Gravity Filters

- Place the sealing washer over the threaded mount.
- Place the filter candle mount stem through the hole in the upper section of the housing and secure with a wing nut. Do not overtighten.
- Ensure that the outlet tap is in the off position.
- Fill the upper chamber with cold water and allow this to filter through to the lower section. It is recommended that this first supply of filtered water is thrown away, as it may contain material washed from the filter candles.
- Fill the upper chamber again, open the outlet tap and, over the course of the next few hours, allow the water to run to waste until it is running clear. The filter is now ready for use.

PLEASE NOTE

- Super Sterasyl® and ATC Super Sterasyl® candles contain carbon granules and black particles may be seen in the water that first runs to waste. This is normal and will clear as the water runs.
- If the filter is left to stand for more than 3 days without use, it is recommended that one litre of water be allowed to run to waste before using.

Operation

Due to filtration of particulate contaminants from the water during use, the flow of water from the filter may reduce over a period of time. To restore the water flow to its normal level, remove the filter and scrub the surface evenly with a clean abrasive kitchen pad under running water or in a bowl, ensuring that the open ended plastic mount is clear of the water, to avoid contamination.

Manufactured by Doulton Water Filters, Newcastle, Staffordshire, ST5 9BT, United Kingdom.

Authenticate and Register your British Berkefeld® Drinking Water Filter

The unique 10 digit authenticity code printed on your British Berkefeld® water filter enables you to authenticate and register your product directly with British Berkefeld®. This gives you the reassurance that you have purchased a genuine British Berkefeld® product that has been precision made, in England, to the highest standards. Authenticity and registration of your British Berkefeld® water filter can be completed online by visiting: www.doulton.com

To ensure an accurate match with the British Berkefeld® database please, carefully, input both the Product Reference Code and the Unique Authenticity Code (indicated above) and follow the instructions on screen.
